

Do you have growers ready to start Precision Agriculture this year?

Follow these simple steps to get started this spring!

1 Review Policy Acreage Lines in GreatAg®

- **Help Ensure Accuracy:** Verify that all field associations are correct.
- **Remove Duplicates:** Eliminate any duplicate lines on the policy.
- **Confirm Irrigation Practices:** Make sure fields in GreatAg mapping reflect the correct irrigation practices.

2 Determine the Precision Data Retrieval Plan with Your Grower

- **Cloud Connection:** If data will be retrieved via a cloud connection (e.g., John Deere, Climate FieldView, Ag Leader), set up the connection ahead of planting.
- **Manual Upload:** Data can be uploaded manually via a USB if not using a cloud connection.

3 Execute!

Questions? Reach out to your Business Developer.

Discover how to easily set up a cloud connection for your grower in GreatAg by watching this short video! Login with your GreatAg user ID and password when prompted.
